Random Forest Assignment

1. To predict insurance charges based on the Input

2. The Basic information about the dataset.

Total Number of rows: 1339 Total number of columns:5

Sl.No	N_estimators	Criterion	Max_features	R Value
1	50	Squared_error	1.0	0.8566
2	50	Friedman_mse	None	0.8595
3	50	Poisson	1.0	0.8536
4	50	Absolute_error	None	0.8521
3	100	Squared_error	1.0	0.8575
4	100	Friedman_mse	None	0.8610
5	100	Poisson	1.0	0.8619
6	100	Absolute_error	None	0.8600
7	100	Squared_error	1.0	0.8555
8	150	Friedman_mse	None	0.8586
9	150	Poisson	1.0	0.8564
10	150	Squared_error	1.0	0.8568
11	150	Absolute_error	None	0.8609
12	150	Friedman_mse	1.0	0.8588
13	100	Squared error	1.0	0.8579
14	100	Friedman_mse	None	0.8532
15	100	Poisson	None	0.8564
16	100	Absolute_error	None	0.8538

The Best model comes with no of estimators as 100 and criterion in Poisson and max_Features is 1.0

The R value is 86.19
